

If safe and secure data protection isn't a top priority for your business or organization – IT SHOULD BE. Losing data through hardware failure or catastrophic event can be disruptive to your business and potentially very costly. Between the productivity loss experienced when data has to be recreated to the potential costs related to HIPAA or other similar compliance requirements to the sheer inconvenience of any data loss, developing and following a good, common sense data protection plan is, quite simply, just good business.

TSS is pleased to be able to offer a comprehensive **DATA PROTECTION SOLUTION** to our valued customers. After extensive research and testing, we can now confidently offer you the peace of mind that comes from knowing that your data is protected – safe and secure. Our solution utilizes state-of-the-art technology and offers you both security and flexibility.

Pass Phrase Encryption – your data is encrypted before it even leaves your system with AES-256 encryption. More than just a password, access to your data requires input of a complete phrase – known only to you. This phrase must be input exactly as you created it – including capital letters, spaces and punctuation. Only after your data is encrypted is it transferred via a secure Internet connection to our servers for storage.

No-Compromise Infrastructure – our redundant servers are protected with biometric access protection, round-the-clock surveillance and monitored 24/7/365 for both performance and security. Your data is protected with geographical diversity – data centers in both Utah and Georgia.

Affordable, Fair-Minded Pricing – our pricing structure is geared to the specific needs of businesses like yours. We've structured our backup solution so that you pay only for those features and services that you need. Plus, we provide you with the high level of service that is often hard to find. We care about your business, your data and your satisfaction. Our pricing is fair and reasonable and doesn't require long term contracts.

Comprehensive Solution – we offer more than a backup “service” – we offer a backup SOLUTION. Our data protection solution includes us taking the time to analyze your specific data requirements – your specific environment - your specific needs – then, we craft a backup solution that is just right for you.

Here's how it works:

1. Our backup software is loaded onto each PC and configured to do scheduled backups of your encrypted data to a specially configured local PC (StoragePC)
2. Your UNIX, Linux and AIX servers are configured to do a network backup to the StoragePC using Microlite BackupEDGE (available by separate license)
3. Your StoragePC executes a daily, encrypted data synchronization over a secure Internet connection with our remote servers
4. An e-mail is sent to you, and us, confirming the successful data backup
5. Once set up, your backups will automatically keep running and protecting your data – day after day without the need for you or your staff to get involved
6. TSS will monitor backups and data usage regularly to ensure reliable data protection – at no additional cost to you
7. You sleep soundly – your data is safe and secure!!

Protecting your data with a comprehensive backup strategy that includes off-site storage is one of the smartest decisions you can make for your business. Don't put it off any longer – give us a call at 507.827.0034 or send a quick e-mail to backup@gotss.com and we will provide pricing and answer any questions you might have – don't delay, get started TODAY !!
